

Tony Wangolo Inganga

Full Stack Software Engineer

+254 111 414 441 wangolotony4@gmail.com tony-three.vercel.app github.com/captainblair Nairobi, Kenya

SUMMARY

Motivated Full Stack Software Engineer specializing in scalable backend architecture, robust relational database design, and end-to-end web deployment ecosystems. Proven track record of developing production-ready systems using Python (Django | Flask) and JavaScript | TypeScript. Adept at creating optimized data structures, implementing secure Role-Based Access Control (RBAC), and maximizing software utility under cloud infrastructure resource constraints

KEY ACHIEVEMENTS

 Optimized Data Structures Increased operational efficiency by 40% through improved data extraction processes.	 Platform Deployment Success Led development of platform managing 800+ student records with zero downtime.
 Community Skills Training Trained over 50 individuals in Git, programming essentials, and digital literacy.	 Enhanced Predictive Tools Successfully integrated machine learning models, enhancing predictive analytics tools by 30%.

EXPERIENCE

ICT Lead

ODM Comrades Chapter

- 📅 2026 - Present 📍 Nairobi, Kenya
- Led frontend for university registration platform using PHP, Laravel. Delivered responsive, role-aware interfaces and workflows, securing 800+ student records without downtime.
 - Engineered client-side validation layers, dashboard UI components, and data capture flows across multi-campus university ecosystems, improving operational data extraction efficiency by 40%
 - Enabled stable, high-volume submission workflows by integrating Laravel REST endpoints into a maintainable frontend architecture for concurrent multi-campus registration activity.

Freelance Full Stack Developer

- 📅 2024 - Present 📍 Remote
- Launched full-stack web platforms with secure authentication and resilient backend query structures using Flask, Django, Streamlit, and MySQL.
 - Enhanced local business forecasting and operational efficiency through machine learning integration and analytics dashboard deployment.
 - Improved code maintainability and delivery speed by building reusable full-stack patterns that supported responsive interfaces and complex relational data workflows.

EDUCATION

Bachelor of Technology, Communications and Computer Networks

Technical University of Kenya

📅 2027

Professional Backend Web Development Certification

ALX Africa

📅 2025

Backend Web Development

ALX Africa

📅 2025

Artificial Intelligence (AI)

ALX Africa

📅 2025

SKILLS

Programming Languages

[Python](#) [TypeScript](#) [PHP](#) [SQL](#) [HTML5](#) [CSS3](#) [Sass](#)

Frameworks & Libraries

[Django](#) [Flask](#) [Next.js](#) [React](#) [Laravel](#) [TailwindCSS](#) [Streamlit](#) [Redux](#)

Databases & Storage

[PostgreSQL](#) [MySQL](#) [SQL Server](#) [Supabase](#)

Infrastructure & DevOps

Core Competencies

[API Design](#) [Role-Based Access Control \(RBAC\)](#) [Data Analysis](#) [System Architecture](#)

PROJECTS

Ustawi | The Smart Rental & Property Platform

<https://ustawi-1.vercel.app/>

Built an end-to-end rental marketplace with Django, Next.js, and PostgreSQL that matched tenants with property managers and improved performance through optimized queries and serverless database connections.

ODM Comrades Chapter (OCC) | Digital Registration & Management Platform

<https://occ.co.ke/>

Co-engineered a Laravel platform with responsive interfaces and REST API, supporting 800+ student records. Streamlined data capture, validation, and registration.

SchoolSys | School Management & Operations Platform

<https://github.com/captainblair/schoolsys1>

Built an end-to-end school administration platform with Django and PostgreSQL, using role-based dashboards and a unified data model to manage profiles, attendance, finances, and library records.

VOLUNTEERING

Volunteer Computer Skills Trainer

LEA Organization

 01/2025 - 06/2026  Nairobi, Kenya

- Upskilled and trained over 50 community members in digital literacy, version control fundamentals utilizing Git | GitHub, and core programming paradigms
- Orchestrated technical engineering workshops, guiding junior learners through local workflow environments, structural web basics, and clean programming code principles
