X: https://x.com/Tony_Blair01

Highly motivated Full Stack Software Engineer specializing in scalable backend architecture, robust relational database design, and end-to-end web deployment ecosystems. Proven track record of developing production-ready systems using Python (Django | Flask) and JavaScript | TypeScript. Adept at creating optimized data structures, implementing secure Role-Based Access Control (RBAC), and maximizing software utility under cloud infrastructure resource constraints.

CORE PRODUCTION PROJECTS

SchoolSys | School Management & Operations Platform

Technical Stack: Python | Django | PostgreSQL | Render | TailwindCSS

Built and shipped a production-ready, full-stack enterprise school administration platform. Architected granular role-based dashboards to manage multi-tiered user streams (students, teachers, administrators). Optimized database schemas for tracking profile approvals, attendance, financial fee records, and library loans into a unified platform.

Repository: <https://github.com/captainblair/schoolsys1>

Ustawi | The Smart Rental & Property Platform

Technical Stack: Python | Django | Next.js | PostgreSQL (Neon Serverless) | Vercel

Developed a full-stack, two-sided rental marketplace matching tenants with property managers. Optimized database queries and implemented serverless PostgreSQL schema connections to scale performance metrics efficiently while respecting tight environment resource baselines.

PROFESSIONAL EXPERIENCE

January 2026 | Present | Nairobi, Kenya

ICT Lead | ODM Comrades Chapter

- Led frontend engineering for a centralized university digital registration platform built with PHP and Laravel, delivering responsive, role-aware interfaces and multi-step registration workflows that supported secure onboarding of 800+ active student records with zero downtime.
- Engineered client-side validation layers, dashboard UI components, and data capture flows across multi-campus university directories, improving operational data extraction efficiency by 40%.
- Collaborated with backend engineers to integrate Laravel REST endpoints and structure high-volume concurrent submission interfaces with clean, maintainable frontend architecture.

2024 | Present

Freelance Full Stack Developer | Remote

- Architected, tested, and deployed end-to-end full-stack web platforms using Python (Flask | Django), Streamlit, and MySQL, focusing heavily on secure authentication modules and robust backend query structures.
- Implemented machine learning and analytical models into custom dashboard interfaces, providing automated decision support tools and predictive analysis layers for localized business platforms.
- Authored clean, maintainable, and reusable codebase patterns, collaborating iteratively to integrate frontend responsive designs with complex relational data systems.

TECHNICAL SKILLS

Languages

Python | JavaScript | TypeScript | PHP | SQL | HTML5 | CSS3 | SASS

Frameworks & Libraries

Django | Flask | Next.js | React | Laravel | TailwindCSS | Streamlit | Redux

Databases & Storage

PostgreSQL | MySQL | SQL Server | Supabase

Infrastructure & DevOps

Docker | Linux | Git | GitHub Actions | Jenkins | Render | Vercel

Core Competencies

API Design | Role-Based Access Control (RBAC) | Data Analysis | System Architecture

January 2025 | June 2026 | Nairobi, Kenya

Volunteer Computer Skills Trainer | LEA Organization

- Upskilled and trained over 50 community members in digital literacy, version control fundamentals utilizing Git | GitHub, and core programming paradigms.
- Orchestrated technical engineering workshops, guiding junior learners through local workflow environments, structural web basics, and clean programming code principles.

EDUCATION

Expected Graduation | 2027

Bachelor of Technology | Communications and Computer Networks

Technical University of Kenya

Graduated

Professional Backend Web Development Certification

ALX Africa
